

Equipment Officer Report – 2021-2022

Avi Levy

Covid

Covid restricted us a bit at the beginning of the season but has eased significantly as the diving season entered its peak which saw equipment hires increase.

Regulators, BCDs, and Wetsuits

We discarded all the old regs, as they haven't been serviceable anymore, and bought 5 new Scuba Pro regs last year which continue to function without issues. We have at least 5 BCDs, while they are not new, they are usable. We also have a lot of wet suits of many sizes.

Tanks

We sold almost all the old aluminium tanks and bought 25 new steel tanks which if treated properly, should last 20-30 years. It's a wise and great long-term investment for the club.

Compressors

The 2 portables are all going good no issues to report. Have been well used with away trips which have significantly benefited club members by numerous away trips Main compressor - The new compressor is estimated to be installed near the end of the current summer dive season.
